## Place Value in Whole Numbers

Family Note In this lesson your child explored the relationships between place values in numbers. Have your child read each number below. Examine the digit 6 in each number.

| Hundred- <br> Thousands | Ten- <br> Thousands | Thousands | Hundreds | Tens | Ones |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 600,000 | 60,000 | 6,000 | 600 | 60 | 6 |

When the digit 6 moves left one place, its value becomes 10 times as large as it was in the previous place. For example, 60 is 10 times as large as 6 , and 600 is 10 times as large as 60.

$\qquad$ .

b. The 6 in 56,143 is worth $\qquad$ | SRB |
| :---: |
| 789 |

c. The 7 in 573,090 is worth $\qquad$ . d. The 1 in 140,007 is worth $\qquad$ .
(2) How does the value of the digit 4 in 489 differ from the value of the digit 4 in 5,741 ?
$\qquad$
a. The value of 8 in 56,982 is $\qquad$ times as large as the value of 8 in 156,408.
b. The value of 8 in 800 is $\qquad$ times as large as the value of 8 in 80 .
c. The value of 9 in 4,934 is $\qquad$ times as large as the value of 9 in 1,290.
(4)
a. Write the number that has . . .

7 in the thousands place
6 in the ten-thousands place
5 in the hundreds place
8 in the ones place
3 in the tens place
$\qquad$ ,
b. On the back of this page, write this number in words.

## Practice

(5) $9+8=$ $\qquad$ (6) $7+8=$ $\qquad$ (7) $30+80=$ $\qquad$
(8) $工=50+40$
(9) $\qquad$ $=17+94$
(10) $158+93=$ $\qquad$

## Country Sizes

This table shows the sizes of 10 countries measured in square miles.

Use a place-value tool to help you answer the questions.
(1) Read the numbers to someone at home.
(2) Which is the largest country listed?
$\qquad$

The smallest? $\qquad$ | SRB |
| :---: |
| 81 |

| Country | Area (in square miles) |
| :--- | :---: |
| Algeria | 919,600 |
| Colombia | 439,700 |
| Ethiopia | 426,400 |
| Egypt | 386,700 |
| Greece | 50,900 |
| Iran | 636,400 |
| Laos | 91,400 |
| Peru | 494,200 |
| Uganda | 93,100 |

Source: worldatlas.com (All data rounded to nearest hundred.)
(3) Compare the areas of Laos and Uganda.
a. Which country has the larger area? $\qquad$ How do you know?
$\qquad$
$\qquad$
b. Write a comparison number sentence.
(4) Order the countries from largest area to smallest area.

| Country | Area (in square miles) |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

## Practice

(5) $140-60=$ $\qquad$ (6) $=57-39$
(7) $115-86=$
$\qquad$

## Rounding

(1) Round the seating capacities in the table below to the nearest thousand.

| Women's National Basketball Association (WNBA) <br> Seating Capacity of Home Courts |  |  |
| :--- | :---: | :---: |
| Team | Seating Capacity | Rounded to the Nearest 1,000 |
| Chicago Sky | 17,500 |  |
| Connecticut Sun | 9,518 |  |
| Indiana Fever | 18,165 |  |
| Los Angeles Sparks | 13,141 |  |
| Minnesota Lynx | 19,356 |  |
| Phoenix Mercury | 18,422 |  |
| Seattle Storm | 17,072 |  |
| Tulsa Shock | 17,839 |  |
| Washington Mystics | 20,308 |  |

Source: www.wnba.com
(2) Look at your rounded numbers. Which teams' arenas have about the same capacity?
(3) Round the population figures in the table below to the nearest hundred-thousand.

| U.S. States with the Five Smallest Populations (2010 Census) |  |  |
| :--- | :---: | :---: |
| State | Population | Rounded to the Nearest 100,000 |
| Wyoming | 563,626 |  |
| Vermont | 626,011 |  |
| North Dakota | 699,628 |  |
| Alaska | 731,449 |  |
| South Dakota | 833,354 |  |

## Practice

(4) $\qquad$ $=60+60$ $\qquad$ $=54+59$
(6) $185+366=$
$\qquad$

## Professional Sports Attendance

Home Link 1-4

The table below shows the attendance for various 2013-2014 professional sports teams. Use the table and a place-value tool to answer the questions.

|  | Chicago* | New York*† | Philadelphia | Boston | Washington |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Hockey | 927,545 | 738,246 | 813,411 | 720,165 | 740,240 |
| Baseball | $2,882,756$ | $3,542,406$ | $3,565,718$ | $3,043,003$ | $2,370,794$ |

Source: ESPN NHL Attendance report 2013-2014 and ESPN MLB Attendance report 2012
*Baseball attendance is for the Chicago Cubs and the New York Yankees.
${ }^{\dagger}$ Hockey attendance is for the New York Rangers.
(1) Which sport had the greater attendance? $\qquad$
(2) Round the attendance at the hockey games.

|  | Nearest 100,000 | Nearest 10,000 |
| :--- | :--- | :--- |
| Chicago |  |  |
| New York |  |  |
| Philadelphia |  |  |
| Boston |  |  |
| Washington |  |  |

(3) Round the attendance for each baseball team to the nearest million.

Chicago: $\qquad$ -

Philadelphia: $\qquad$ New York: $\qquad$

Washington: $\qquad$
(4) List the cities in order from greatest to least hockey attendance.
(5) Write a number sentence comparing the greatest and least baseball attendances. Use $<,>$, or $=$.
$\qquad$

## Practice

(6) $210-150=$ $\qquad$ (7) $140-80=$ $\qquad$ (8) $93-58=$ $\qquad$

## Using Estimation Strategies

Family Note Today students explored different ways of estimating: rounding (in which all numbers are rounded to a particular place value), front-end estimation (all digits to the right of the greatest place value become zeros), and using close-but-easier numbers (numbers are rounded to a number that is close in value and easy to work with). While all methods of estimation are equally valid, some may be more helpful than others for answering specific kinds of questions.

Read the number stories. Choose an appropriate estimation strategy.
(1) On the walk home from school, Meg stopped at the library for 22 minutes and at her grandmother's house for 38 minutes. She spent 17 minutes walking. She left at 3:00 and was supposed to be home by 4:00.
a. Did Meg make it home on time? $\qquad$ How did you get your answer?
$\qquad$
$\qquad$
b. Why did you choose your estimation strategy? $\qquad$
$\qquad$
$\qquad$
(2) You and two friends need to make 100 tacos for a party. You have made 31 tacos. Your friend Chris has made 24 tacos. Your friend Pat thinks he needs to make at least 60 tacos to have enough for the party.
a. Is Pat correct? $\qquad$ How did you get your answer?
$\qquad$
$\qquad$
b. Why did you choose your estimation strategy? $\qquad$
$\qquad$
$\qquad$

## Practice

(3) $31+51=$ $\qquad$
(4) $45+64=$ $\qquad$
(5) $252+144=$ $\qquad$

## Animal Number Stories

Estimate. Then solve each number story.
(1) The zoo needs to move four animals in a truck that can carry only 700 pounds. A leopard can weigh up to 176 pounds. A warthog can weigh up to 250 pounds. A chimpanzee can weigh as much as 130 pounds. What is the maximum weight that the fourth animal can be?

Estimate: About $\qquad$ pounds

Answer: $\qquad$ pounds

Number model with answer: $\qquad$
Does your answer make sense? $\qquad$ How do you know?
$\qquad$
$\qquad$
(2) The combined weight of a mountain lion, an orangutan, and a wolf can be as much as 491 pounds. If the wolf weighs 175 pounds and the orangutan weighs 180 pounds, how much do two mountain lions weigh?

Estimate: About $\qquad$ pounds

Answer: $\qquad$ pounds

Number model with answer: $\qquad$
Does your answer make sense? $\qquad$ How do you know?
$\qquad$
$\qquad$
Source: maximum animal weights from www.nationalgeographic.com

## Practice

(3) $5+8=$ $\qquad$
(4) $9+6=$ $\qquad$
(5) $70+50=$ $\qquad$
(6) $\qquad$ $=80+50$
(7) $67+94=$ $\qquad$
(8) $\qquad$ $=425+275$

## U.S. Traditional Addition

## Home Link $1-7$

Family Note In today's lesson students were introduced to U.S. traditional addition.
The steps are listed below.

Step 1
Add the $1 \mathrm{~s}: 9+7=16$.
16 ones $=1$ ten and 6 ones
Write 6 in the 1 s place below the line.
Write 1 above the digits in the 10 s place.

## Step 2

Add the $10 \mathrm{~s}: 7+4+1=12$.
12 tens $=1$ hundred +2 tens
Write 2 in the 10 s place below the line.
Write 1 in the 100 s place below the line.

Make an estimate. Write a number model to show what you did. Then solve using U.S. traditional addition. Compare your answer with your estimate to see if your answer makes sense.

| (1) $\begin{array}{r}36 \\ +46 \\ \hline\end{array}$ <br> Estimate: | (2) $\begin{array}{r}47 \\ +95 \\ \hline\end{array}$ <br> Estimate: | (3) $784+889=$ <br> Estimate: $\qquad$ |
| :---: | :---: | :---: |
| (4) $\begin{array}{r}689 \\ +839 \\ \hline\end{array}$ | (5) $279+1,795=$ <br> Estimate: | (6) $3,746+6,255=$ <br> Estimate: |

## Practice

(7) Round 2,787 to the nearest . . .
hundred $\qquad$ thousand $\qquad$
(8) Round 54,681 to the nearest . . .
thousand $\qquad$
$\qquad$

## Grouping by <br> Multiples of 10

Alfie is ordering table tennis balls for the recreation center. A box holds 10 balls. A carton of table tennis balls holds 10 boxes.

## Box of table tennis balls

## Carton of table tennis balls

(1) How many table tennis balls are in one carton? $\qquad$
(2) Alfie ordered 7 cartons and 3 boxes of table tennis balls. How many balls did he order? $\qquad$
Show how you know your answer is correct.
(3) Explain how the cartons and boxes for table tennis balls are like the digits for numbers in our base-10 number system.

## Practice

(4)
$440+294=$ $\qquad$ (5) $166+707=$ $\qquad$
(6) $\qquad$ $=425+886$
(7) $1,474+529=$ $\qquad$

## U.S. Traditional Subtraction

Family Note In today's lesson students were introduced to U.S. traditional subtraction. The process is shown below for the problem 653-387.

## Step 1:

Start with the ones. Trade 1 ten for 10 ones. Subtract the ones.

| $100 s$ | $10 s$ | $1 s$ |
| ---: | ---: | ---: |
|  | 4 | 13 |
| 6 | 5 | $\not 2$ |
| $-\quad 3$ | 8 | 7 |
|  |  |  |

## Step 2:

Go to the tens. Trade
1 hundred for 10 tens.
Subtract the tens.

| $100 s$ | $10 s$ | $1 s$ |
| ---: | ---: | ---: |
|  | 14 |  |
| 5 | 4 | 13 |
| 8 | 5 | $\not 2$ |
| $-\quad 3$ | 8 | 7 |
|  |  | 6 |

## Step 3:

Go to the hundreds.
We don't need to regroup, so just subtract.

| $100 s$ | $10 s$ | $1 s$ |
| ---: | ---: | ---: |
|  | 14 |  |
| 5 | 4 | 13 |
| 8 | 5 | $\not 2$ |
| $-\quad 3$ | 8 | 7 |
| 2 | 6 | 6 |

Make an estimate. Write a number model to show what you did. Then solve using U.S. traditional subtraction. Compare your answer with your estimate to see whether your answer makes sense.

| (1) $\begin{array}{r}85 \\ -38 \\ \hline\end{array}$ <br> Estimate: | (2) $\begin{array}{r}613 \\ -249 \\ \hline\end{array}$ <br> Estimate: $\qquad$ | (3) $506-187=$ <br> Estimate: |
| :---: | :---: | :---: |
| (4) $951-695=$ <br> Estimate: $\qquad$ | (5) $\begin{array}{r}1,544 \\ -\quad 749 \\ \hline\end{array}$ <br> Estimate: | (6) $7,003-4,885=$ <br> Estimate: $\qquad$ |

## Practice

(7)
$740+294=$ $\qquad$ (8) $2,566+807=$ $\qquad$

## Snake Lengths

Use the measurement scales to solve the problems.

(1)

| Feet | Inches |
| :---: | :---: |
| 1 |  |
| 6 |  |
| 8 |  |
| 12 |  |

(2) | Yards | Feet |
| :---: | :---: |
| 1 |  |
| 3 |  |
| 8 |  |
| 16 |  |

(3) The king cobra can measure a little over 4 yards in length. The black mamba can reach a length of almost 5 yards. What is the combined length of the two snakes in feet?

Answer: $\qquad$ feet
(4) The Burmese python can be anywhere from 16 to 23 feet long. What is the difference in length in inches between the longest and shortest Burmese python?

Answer: $\qquad$ inches

## Practice

(5) Write 4,857 in words.
$\qquad$
(6) Write 14,066 in words.

## Line Segments, Lines, and Rays

# Home Link 1-11 

(1) List at least 5 things in your home that remind you of line segments.
$\qquad$
$\qquad$
$\qquad$
Use a straightedge to complete Problems 2 and 3.
(2) a. Draw and label line $E F$.
b. Draw and label line segment $E F$.
c. Explain how your drawings of line $E F$ and line segment $E F$ are different.
$\qquad$
$\qquad$
(3)
a. Draw and label ray $S R$.
b. Anita says ray $S R$ can also be called ray $R S$. Do you agree? Explain.
(4)

Name the parallel line segments.

## Practice

(5)
$\begin{array}{r}964 \\ -348 \\ \hline\end{array}$
(6)
$\begin{array}{r}662 \\ -497 \\ \hline\end{array}$
(7)

$$
\begin{array}{r}
2,423 \\
-1,491 \\
\hline
\end{array}
$$

Use a straightedge to draw the geometric figures.
(1) Draw 2 examples of a rectangle.

(2) Draw 2 examples of a right triangle.

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

(3) How are the shapes in Problems 1 and 2 similar? How are they different?
$\qquad$
$\qquad$
a. Draw right angle $D E F$.
(5) Draw an angle that is larger than a right angle. Label the vertex $K$.
b. What is the vertex of the angle? Point $\qquad$
c. What is another name for $\angle D E F$ ? $\qquad$

## Practice

Use U.S. traditional subtraction.
(6) $-756-348$
(7) $700-450=$ $\qquad$
(8) $7,942-3,887=$ $\qquad$

Family Note In class, students developed some rules, or formulas, for finding the perimeter of a rectangle. Here are three possible formulas:

- Add the measures of the four sides: perimeter of a rectangle $=$ length + length + width + width. This formula can be abbreviated as: $p=I+I+w+w$.
- Add the two given sides and double the sum: perimeter of a rectangle $=2 *$ (length + width). This formula can be abbreviated as: $p=2 *(l+w)$.
- Double the length, double the width, and then add: perimeter of a rectangle $=(2 *$ length $)+$ ( $2 *$ width). This formula can be abbreviated as: $p=2 l+2 w$.

In all of the formulas, the letter $p$ stands for the perimeter of a rectangle, the letter I stands for the length of the rectangle, and the letter $w$ stands for the width of the rectangle.

Find the perimeters of the rectangles below.
(1)

Perimeter: $\qquad$ feet
(3)

Perimeter: $\qquad$ feet

Perimeter: $\qquad$ inches
(4)

Perimeter: $\qquad$ inches
(5) The perimeter of a garden is 42 feet. The length is 15 feet. What is the width?

Width: $\qquad$ feet

## Practice

Round each number to the nearest ten-thousand and hundred-thousand.
(6)

421,492 $\qquad$
$\qquad$
(7)

895,531 $\qquad$
$\qquad$
